**Press Release: InfoWest Connects St. George City
With High Speed Fiber Optic Connection**

St. George, Utah – (February 16, 2009) – InfoWest - Southern Utah's leading Internet provider is lighting the way for the City of St. George. InfoWest is providing the City with access to its fiber based network enabling high bandwidth capability and more importantly Internet redundancy.

Redundant Fiber Optic Systems

The newly installed fiber optic connection provides St. George City with additional speed and reliability. "InfoWest is a St. George company and we have a desire to make our community a better place to live", stated InfoWest's President Kelly Nyberg. "A fast and redundant fiber optic connection for the City is certainly something that shows the City's desire to build our community with the future and technology in mind."

Benefits of Fiber Optics

The new High Speed fiber optic connection to InfoWest is not only faster, but also adds an additional level of quality and reliability for the City. InfoWest has multiple Internet connections leading out of the area, so if a fiber is cut along the I-15 corridor in the future this new fiber connection will help keep City operations up and running.

Internet That's Fast

Another important aspect of this new fiber connection is the speed and efficiency it brings to the City. Fiber optics allow the transfer of data at the speed of light. Now the City can transfer files and communicate between its various departments and other organizations such as the County and the State more quickly.

St. George City and Technology

"St. George City has always been proactive in its adoption and use of technology. This new fiber optic connection to InfoWest provides us with additional speed and reliability." commented Marc Mortensen, "This is just one more step in our efforts to use technology to create a more efficient and productive environment for the City's operations."

About InfoWest

Based in St. George, Utah, InfoWest was founded in 1994 to provide high speed Internet services in areas across the state of Utah.
